DAY-1

HTTP — HYPERTEXT TRANSFER PROTOCOL.

·HTTP1	Vs	HTTP 2

* Introduced in 1996

* Broweser makes several requests for one piece of information at a time

* It repeats untill a webpage is fully loaded.

* This is why most webpages are slowly loaded

* Introduced in 2015

* Browser requests several pieces of information at a time.

* The several will then push them all at once when required

* As a result, it makes a website load much quicker.

Objects and its internal representation of Javascript :-

Objects, in Javascript is most important datatype and forms the building blocks for modern Javascript.

These are quite diff. from Javascript Primitive datatypes.

Objects contain any combination of these primitive datatypes as well as reference data types...

```
Var myCar = new Object();
myCar.make = 'ford';
myCar.model = ! Mystang !..

let bike = {name : 'Superspot', maker ='Docti'}
```
